Leading Edge Metals—Larger Facility; Expanded Products and Services

Gardena, CA - On August 24, 2012, Leading Edge Metals & Alloys, LLC plans to open a new headquarters facility in Gardena, CA. Leading Edge Co-Founder Phillip Guthrie reports, the new warehouse “is more than six times larger than the building we previously occupied.” The new space will allow Leading Edge to expand by adding new product lines, new processing equipment, and new personnel.

Leading Edge offers high-quality specialty materials used in a variety of applications, and provides easy distribution from its southern California location as well as an additional site in Indianapolis, IN. The larger size of the new facility in Gardena, CA will allow Leading Edge to add additional inventory. The company will add new product lines in addition to increasing inventory of current products. This expansion bodes well for Leading Edge customers, who can look forward to having even more of their specialty materials needs met by Leading Edge in the future.

In addition to adding new product lines, the new facility has room for more processing equipment, which will position Leading Edge to serve customers in an exciting new way. While historically Leading Edge has built its reputation on providing the highest-quality materials and expert advice about suitability, machining techniques, and cost effectiveness, now the company will be able to provide finishing and machining services as well. “Adding extra equipment will allow us to make parts beyond raw material,” Guthrie said, “which will better serve our customers. That is a very positive thing—for our customers and for us.”

Serving customers has always been a motivating focus for Leading Edge. When he founded the company, Guthrie built on a need he saw in the materials industry—the way materials specialists interact with customers. Leading Edge employs specialists with great expertise in materials who work closely with customers, offering valuable advice about which materials will best suit unique and challenging needs, how the materials are best machined, and which solutions can meet each customer’s needs most economically. After the move to the new warehouse, Leading Edge plans to hire additional personnel to further enhance customer experience with the company.

Leading Edge plans to be up and running at its new, expanded location on August 24, 2012. The new site is located at 329 East 157th Street, Gardena, CA. Current and potential customers can contact the company toll free at 877-455-LEMA (5362), at 310-225-4600, or via fax at 310-225-4604.
